

# ENERGY SOLUTIONS.

Managing both large projects and the day-to-day operations of energy production facilities can be challenging. Burdensome governmental regulations, an aging fleet of generators, and the increasing cost of emission credits are just a few of the things on your plate. In addition, your insurance and risk management program is a crucial component of your business; the limits, deductibles, exposure analysis and especially policy language are central to protecting your assets, properties and people.

BHS Energy Solutions was created to reduce the challenges faced by municipal and independent power producers. Our team of insurance professionals has the technical expertise and background to supervise and administer your program through expert analysis, customized insurance design and comprehensive safety, loss control and risk management practices. In addition, we have the tremendous expertise in Public Entities, such as municipalities, airports and public transportation, to handle any insurance requirements your organization may face.

## **Specialized Energy Loss Control Services**
